The AM3 Integrated Table/Tubestand System

- This ruggedly constructed table will consistently support patient weights up to 350 pounds, making it ideal for busy clinics with demanding caseloads. Heavy-duty, all-steel construction and an extra-long pedestal create a durable table that will last for years.
- Patient positioning is quick and easy on the flat top table. Its smooth surface means no grooves or ridges for clothes to snag or grime to collect.
- An integrated design provides continuous attachment of the tubestand to the table and requires no modification of office walls or ceilings.
- One feature enables a full range of off-table procedures including stand-knee and ankle. The complete system includes the Americomp Wallstand and your choice of high-performance generators.

The unique off-table tubestand option makes stand-knee and ankle procedures possible on the AM3 system.
